***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: applicants claim a hydroformylation process comprising the reaction of at least one olefinic compound with hydrogen and carbon monoxide in the presence of a cobalt catalyst, and a method for suppressing the cobalt-catalyzed formation of methane from hydrogen and carbon monoxide in a hydroformylation process. It is recognized in the prior art, as shown by Oswald et al (US 4,593,141) that the synthesis gas, i.e., carbon monoxide and hydrogen, in hydroformylation reactions can contain un-reactive impurities such as water vapor, carbon dioxide, nitrogen, and methane formed during the reaction (see Oswald et al., col. 7, lines 3-7). The closest prior art of record fails to teach or fairly suggest conducting a hydroformylation reaction in a reactor comprising a gas cap region and a liquid-containing region, wherein a sulfur-containing additive is present on the inside walls of the gas cap region, as claimed herein. The presence of said sulfur-containing additive on the inside walls of the hydroformylation reactor has been shown by applicants to suppress the methanation reaction, i.e., the formation of methane as a result of the hydroformylation reaction. Accordingly, the instant claims have been allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
